

UNIVERSITY OF LEEDS

CANDIDATE BRIEF

Early Stage Researcher in Synthetic Glycobiology (ESR2: Mucin-like glyocalyx modules for creating complex artificial glyocalyxes)

Salary: In line with Marie Skłodowska-Curie Innovative Training Network requirements

Reference: MAPCH1108

Closing date: 7 January 2019

Fixed-term for 36 months

Early Stage Researcher in Synthetic Glycobiology Marie Skłodowska-Curie Innovative Training Network

Are you keen to progress research in glycoscience at the interface between chemistry, biology and physics, in the first four years of your research career and based outside the UK? Do you want to further your career and attain a PhD in one of the UK's leading research intensive universities?

[synBIOcarb](#) is a Marie Skłodowska-Curie Innovative Training Network (MSCA-ITN-ETN). It brings together 14 leading European partners in a transnational network, implementing a multidisciplinary and intersectorial research and training programme between the academic and the industrial partners in the fields of synthetic glycobiology.

Together, we will provide 15 early stage researchers (ESRs) with advanced scientific training in chemical synthesis, protein engineering, biophysics, cell biology and analytical device technologies that underpin the development and exploitation of glycoscience for diagnostics and targeted drug delivery. Each ESR will contribute to one, or more, of four thematic [work packages](#) that have been designed to progress the state of the art in Synthetic Glycobiology.

Practical scientific training will be complemented by a coordinated programme of industry-relevant transferable skills, that will prepare the ESRs for future careers in the medical technologies sector.

As an ESR in Leeds, you will undertake research in the synthesis of mucin-like glycocalyx modules for creating complex artificial glycocalyxes. You will interact and develop research collaborations with our [synBIOcarb academic and industrial partners](#), and in addition you will participate in activities of the Innovative Training Network, including attending training courses and visiting other sites.

To meet the requirements of the Marie Skłodowska-Curie Innovative Training Network, you will be an early stage researcher within the first four years of your research career, have not yet been awarded a doctoral degree (PhD), and have not lived or carried out your main activity (work/study) in the UK for more than 12 months during the past three years.

As well as previous research experience, you will have a Masters in chemistry or a related discipline or a BSc and an equivalent level of professional qualifications or experience.

Salary

The Marie Skłodowska-Curie Early Stage Researcher living and mobility allowance is fixed at €48,452 per annum (plus family allowance if applicable). This amount will be subject to tax and National Insurance deductions, and will be paid in UK Sterling (£) using an appropriate conversion rate.

What does the role entail?

As an Early Stage Researcher your main duties will include:

- Contributing to the synBIOcarb Innovative Training Network (ITN) under the supervision of Professor Bruce Turnbull;
- Undertaking ongoing research at doctoral degree level into synthetic glycobiology as indicated on the [synBIOcarb website](#);
- Participating in synBIOcarb ITN activities to ensure a successful programme of investigation, including attending group meetings and seminars, training courses and site visits; as well as collaborating with academic and industrial partners;
- Contributing to the dissemination of research results in leading peer-reviewed journals and through presentation at meetings and conferences, with guidance as necessary;
- Ensuring good progress of your work and keeping up-to-date records;
- Providing support and advice to other members of the ITN;
- Working both independently and as part of a larger team of researchers and stakeholders;
- Continually updating your knowledge, understanding and skills in the research field in which you work.

These duties provide a framework for the role and should not be regarded as a definitive list. Other reasonable duties may be required consistent with the grade of the post.

What will you bring to the role?

As an Early Stage Researcher you will have:

- A masters-level degree in Chemistry, or a related discipline; or a BSc in Chemistry with an equivalent level of professional qualifications or experience;
- The ability to meet all eligibility requirements for appointment in the UK as an Early Stage Researcher funded by the Marie Skłodowska-Curie Innovative Training Network:
 - You must be within the first four years (full-time equivalent) of your research career, and have not yet been awarded a doctoral degree (e.g. PhD), at the time of recruitment to this role;
 - You must not have resided or carried out your main activity (such as work or study) in the UK for more than 12 months during the three years prior to your recruitment to this role;
- The ability to meet the University's eligibility requirements to enrol on a PhD degree, including English language requirements if English is not your first language;
- Experience of undertaking academic research;
- Good interpersonal and communication skills, both written and verbal, and the ability to communicate effectively with a wide range of stakeholders;
- Good time management and planning skills, with the ability to meet tight deadlines and manage competing demands effectively;
- A proven ability to work well both independently and as part of a team;
- A keen interest in multidisciplinary work;
- A strong commitment to your own continuous professional development.

You may also have:

- Working experience in chemical or enzymatic synthesis of carbohydrates surface functionalisation;
- Evidence of contributing to papers in internationally recognised, peer-reviewed journals or evidence of publishable research in progress.

How to apply

You can apply for this role online; more guidance can be found on our [How to Apply](#) information page. Applications should be submitted by **23.59** (UK time) on the advertised closing date.

Additional information

Project ESR2 - Mucin-like glycocalyx modules for creating complex artificial glycocalyxes

All cells are covered with a coating of complex carbohydrates (the glycocalyx) and many viruses, bacteria and protein toxins produced by bacteria exploit this sugar coating as a means of binding to and entering their target cells. The glycocalyx on many living cells extends >100 nm from the cell membrane, and its outer portion is dominated by proteoglycans and mucins which have extended and highly glycosylated structures. Interactions of proteins with these glycosylated structures is important for cellular interactions and also may influence the ability of bacterial toxins to reach their primary receptors on the cell membrane. The aim of this project is to construct artificial mucin-like structures that bear blood group antigens and/or tumour-associated carbohydrate antigens and to incorporate them into artificial cells (protocells) and biosensor arrays for protein binding experiments using natural and re-engineered lectins. The tool box of novel glycocalyx complexes that you create will have applications in developing diagnostic and analytical methods for detecting toxins, parasites or antibodies against tumour antigens.

Through this interdisciplinary project you will develop skills in chemical and enzymatic synthesis of carbohydrates; bioorthogonal ligation chemistry; biophysical techniques for measuring the affinity for molecular interactions; functionalization of biomimetic surfaces. Appropriate training will be provided in all areas that are new to the researcher.

Training and location

The successful candidate will participate in the network's training activities and work placements at the laboratories of the participating academic and industrial teams.

Regular meetings and workshops within the synBIOcarb International Training Network will supplement the training and support provided at the University of Leeds.

This post will be based in the laboratory of Prof Bruce Turnbull which belongs to the School of Chemistry (Faculty of Maths & Physical Sciences), and the Astbury Centre for Structural Molecular Biology. You will collaborate with the laboratory of Dr. Ralf Richter which belongs to the School of Biomedical Sciences (Faculty of Biological Sciences), the School of Physics (Faculty of Mathematics and Physical Sciences), which is also part of the Astbury Centre.

Working at Leeds

Find out more about the benefits of working at the University and what it is like to live and work in the Leeds area on our [Working at Leeds](#) information page.

A diverse workforce

The Faculty of Mathematics and Physical Sciences is proud to have been awarded the [Athena SWAN Bronze Award](#) from the Equality Challenge Unit, the national body that promotes equality in the higher education sector. Our [equality and inclusion webpage](#) provides more information.

Candidates with disabilities

Information for candidates with disabilities, impairments or health conditions, including requesting alternative formats, can be found on our [Accessibility](#) information page or by getting in touch with us at disclosure@leeds.ac.uk.

Criminal record information

Rehabilitation of Offenders Act 1974

A criminal record check is not required for this position. However, all applicants will be required to declare if they have any 'unspent' criminal offences, including those pending.

Any offer of appointment will be in accordance with our Criminal Records policy. You can find out more about required checks and declarations in our [Criminal Records](#) information page.
