

UNIVERSITY OF LEEDS

CANDIDATE BRIEF

Research Technician for Microfibre Analysis (The Microfibre Consortium), School of Design, Faculty of Arts, Humanities and Cultures

Salary: Grade 5 (£22,659 – £26,243 p.a.)

Reference: AHCDE1066

Closing date: 12 May 2019

Full time, fixed-term for 12 months

Research Technician for Microfibre Analysis (The Microfibre Consortium), School of Design, Faculty of Arts, Humanities and Cultures

Are you a researcher with proven abilities to carry out research in fibre and textile technology? Are you able to use your expertise to support or complement our existing strengths in textile technology?

The School of Design is a highly ranked department with a vibrant research culture and a commitment to excellence in teaching. You will join an experienced, innovative and diverse team and will be actively involved in research, producing high quality publications and contributing to the School's Research Excellence Framework (REF).

Working with an established research team, and with the support of The Microfibre Consortium (TMC), the successful candidate will carry out testing and research to develop a better understanding of microfibre release from textile products during domestic laundry. This work will be based on recent research carried out at the University of Leeds which has contributed to the academic, industrial and media discussions about ocean pollution from washing clothes. During the project you will have the opportunity develop a deeper understanding of the mechanisms of microfibre release and the impact of material, yarn, and fabric factors on this release.

You will have a degree in textile technology, polymer material science, or other science and technology related discipline.

What does the role entail?

As a Research Technician, your main duties will include:

- Work within the project remit as set out by the Microfibre Consortium (TMC), project sponsors to this work;
- Support TMC project management processes providing updates in regular meetings through the use of Gantt and Budget tools;
- To undertake a research project to test textile materials to understand the influence of materials, yarns and fabric factors on the release of microfibres using the existing TMC test protocol;

- To analyse and interpret experimental results, and to prepare research reports for TMC and for publications under supervision;
- To plan and co-ordinate day-to-day project work with other colleagues, ensure good progress is maintained and work is undertaken in a systematic way;
- To liaise, coordinate and collaborate with internal and external project partners with regards to organising and coordinating work programme;
- To work within and apply the standard operating procedures, health and safety regulations and quality assurance procedures of the School and be responsible for the health and safety management of research work;
- Any other duties as may reasonably be required, consistent with the grade of the post.

These duties provide a framework for the role and should not be regarded as a definitive list. Other reasonable duties may be required consistent with the grade of the post.

What will you bring to the role?

As a Research Technician, you will have:

- Hold at least a 2:1 BSc or BEng (or equivalent, or with equivalent experience) in textile technology, polymer material science, or other science and technology related discipline;
- Motivation and enthusiasm for developing a technical career in an academic environment;
- Demonstrable experience of working in a technical capacity within a science, technology or engineering discipline;
- Knowledge of textile materials;
- Experience of experimental work;
- Demonstrable experience of working with external partners;
- Have experience of working both independently and as part of multidisciplinary teams;
- Excellent interpersonal and communication skills;
- Other IT skills appropriate to support the research project and relevant teaching activities;
- Demonstrable time management and organisation skills, with the ability to meet deadlines.

You may also have:

- A Masters degree or PhD in textile technology, polymer material science, or other science and technology related discipline;
- Demonstrable skills of academic writing report and journal paper;
- Knowledge and experience of textile testing;
- Experience of both characterisation and testing of textile materials;
- Knowledge of textile product development process.

How to apply

You can apply for this role online; more guidance can be found on our [How to Apply](#) information page. Applications should be submitted by **23.59** (UK time) on the advertised [closing date](#).
