

UNIVERSITY OF LEEDS

CANDIDATE BRIEF

**Research Fellow in Railway Energy Hub Modelling and Optimization,
Faculty of Engineering and Physical Sciences**

Salary: Grade 7 (£41,064 – £48,822 p.a.)

Reporting to: Professor Kang Li

Reference: EPSEE1159

Fixed-term (for 18 months - to complete specific time limited work)

Location: Leeds main campus

We are open to discussing flexible working arrangements

Research Fellow in Railway Energy Hub Modelling and Optimization, School of Electronic and Electrical Engineering.

Are you a researcher looking for your first challenge? Do you have a background in electric power systems and transport decarbonization? Do you want to further your career in one of the UK's leading research-intensive universities?

Overview of the Role

As a Research Fellow in Railway Energy Hub Modelling and Optimization, you will join an exciting consortium to accelerate the journey to transport decarbonisation by developing energy hubs and networked energy hubs for, potentially, as many as over 2,500 railway stations and depots across the UK, and extend the technology to road, ports and airports. You will be improving efficiency and supporting transport electrification with networked railway energy hubs, while offering greater flexibility to support both transport and grid operation. The project will explore the commercial opportunities to adopt and scale up networked energy hubs as virtual power plants to deliver creative, predictable, and cost-effective use of electric power on the transport while offering flexibility services to the power grid.

Main duties and responsibilities

- Conducting railway and road traction power network and power grid monitoring, modelling, and simulation studies, and assessing energy hub potentials in improving energy efficiency and offering ancillary services to the utility grid;
- Designing networked energy hubs as virtual power plant by working with project and industrial partners, and identifying use cases for railway and road electrification and decarbonization;
- Developing energy management systems for energy hubs and networked energy hubs, and assessing technological transferability, including off-shelf solutions, communication infrastructure, and cyber security issues;
- Generating and pursuing independent and original research ideas in the appropriate subject area;

- Developing research objectives and proposals and contributing to setting the direction of the research project and team including preparing proposals for funding in collaboration with colleagues;
- Evaluating methods and techniques used and results obtained by other researchers and to relate such evaluations appropriately to your own research;
- Making a significant contribution to the dissemination of research results by publication in leading peer-reviewed journals and by presentation at national and international meetings;
- Working independently and as part of a larger team of researchers, both internally and externally, to develop new research links and collaborations and engage in knowledge transfer activities where appropriate;
- Maintaining your own continuing professional development and acting as a mentor to less experienced colleagues as appropriate;
- Contributing to the training of both undergraduate and postgraduate students, including assisting with the supervision of projects in areas relevant to the project.

These duties provide a framework for the role and should not be regarded as a definitive list. Other reasonable duties may be required consistent with the grade of the post.

Qualifications and skills

Essential

- A PhD (or have submitted your thesis before taking up the role) in Electrical Engineering or a closely allied discipline;
- A strong background in both electric power system and railway traction network modelling and analysis, and competent skills on power network modelling and simulation, and power flow analysis;
- Excellent track record on optimization software development for microgrids and virtual power plants to provide services to both railway networks and power grids;
- Good time management and planning skills, with the ability to meet tight deadlines and manage competing demands effectively without close support;
- A developing track record of peer-reviewed publications in international journals;

- Excellent communication skills both written and verbal, and the ability to communicate your research at national and international conferences;
- A proven ability to work well both individually and in a team;
- A strong commitment to your own continuous professional development.

Desirable

- Experience of pursuing external funding to support research;
- Experience of working in collaborative projects on transport electrification/decarbonization or with industrial partners in the energy and transport field.

How to apply

You can apply for this role online; more guidance can be found on our [How to Apply](#) information page. Applications should be submitted by **23:59** (UK time) on the advertised closing date.

Additional information

Faculty and School Information

Further information is available on the research and teaching activities of the [Faculty of Engineering](#) and the School of [Electronic and Electrical Engineering](#).

Working at Leeds

We are a campus-based community and regular interaction with campus is an expectation of all roles in line with academic and service needs and the requirements of the role. We are also open to discussing flexible working arrangements. To find out more about the benefits of working at the University and what it is like to live and work in the Leeds area visit our [Working at Leeds](#) information page.

A diverse workforce

As an international research-intensive university, we welcome students and staff from all walks of life and from across the world. We foster an inclusive environment where all can flourish and prosper, and we are proud of our strong commitment to student education. Within the Faculty of Engineering and Physical Sciences we are dedicated to diversifying our community and we welcome the unique contributions that individuals can bring, and particularly encourage applications from, but not limited to Black, Asian and ethnically diverse people; people who identify as LGBT+; and people with disabilities. Candidates will always be selected based on merit and ability.

The Faculty of Engineering and Physical Sciences are proud to have been awarded the Athena Swan Silver Award from [AdvanceHE](#). The [Athena Swan Charter](#) is a framework which is used across the globe to support and transform gender equality within higher education and research. Our [equality and inclusion webpage](#) provides more information.

Information for disabled candidates

Information for disabled candidates, impairments or health conditions, including requesting alternative formats, can be found under the 'Accessibility' heading on our [How to Apply](#) information page or by getting in touch by emailing HR via hr@leeds.ac.uk.

Criminal Record Information

Rehabilitation of Offenders Act 1974

A criminal record check is not required for this position. However, all applicants will be required to declare if they have any 'unspent' criminal offences, including those pending.

Any offer of appointment will be in accordance with our Criminal Records policy. You can find out more about required checks and declarations in our [Criminal Records](#) information page.

Salary Requirements of the Skilled Worker Visa Route

Please note that this post may be suitable for sponsorship under the Skilled Worker visa route but first-time applicants might need to qualify for salary concessions. For more information, please visit [the Government's Skilled Worker visa page](#).

For research and academic posts, we will consider eligibility under the Global Talent visa. For more information, please visit [the Government's page, Apply for the Global Talent visa](#).
